TC2800

Continuation of 11. does NOT place the application in condition for allowance because: the arguments are not persuasive. First, applicant argues that the finality of the last Office Action is improper due to the new ground of rejection introduced by the examiner [page 2 of remarks]. However, this argument is not persuasive. As stated in the last Office Action, the IDS filed on August 18, 2005 prompted the new ground of rejection presented in the last Office Action. MPEP 706.07(A) states that it is proper to make the next Office action Final if the new ground of rejection is based on information submitted in an IDS, whether or not the claims have been amended. Thus, the finality of the last Office action is considered to be proper.

On page 3 of the remarks, applicant continues arguing that the reference fails to teach the limitations about the peak point of the impurity concentration. However, the argument is not persuasive. Although it is conceded that the term "peak point" differs from the term "depth", it is noted that nowhere in the Kuwabara reference the term "depth" is used to describe the layers (11) and (21). In fact, Kuwabara uses the term "thickness" [paragraphs 0015 and 0016], which is not a vague term but clearly defines the boundaries of the layer. As it is known in the art, the peak of an impurity concentration inherently occurs at a point within the defined thickness. For instance, the peak of impurity concentration of layer 21 of Kuwabara inherently occurs at a point of not more than, for example, 0.1 micrometers, which is one of the thickness values disclosed in paragraph [0016]. Thus, it is considered that Kuwabara anticipates the claimed invention. Finally, applicant argues that the rejection must fails since the reference fails to teach the claimed limitations of a contact layer formed in the impurity layer. However, it seems that applicant is ignoring the interpretation set forth in the last Office Action. On page 3 of the last Office Action, the examiner stated that the final structure of the claimed invention is the same as the layered structure disclosed by Kuwabara, no matter how the layers are formed. Thus, the claimed limitation does not patentably distinguish the final structure from the one disclosed in the prior art.

As such, the rejection is considered to be proper.
